

RCS Business Messaging has landed

Everything you need to know about the rich messaging standard

RCS Business Messaging is finally here. After years of hype and anticipation, pioneering companies are starting to deliver rich, app-like experiences to customers – all via their messaging inboxes.

Even more excitingly, these CX first-movers are [seeing engagement and sales metrics soar](#). Turns out the reach of mobile messaging combined with images, photos, video and interactive buttons kills SMS on the metrics front.

RCS (rich communication services) is helping these businesses optimize customer interactions too. It's all thanks to the wide range of interaction data they're able to analyze – from read receipts to engagement tracking.

The OpenMarket RCS API

OpenMarket's easy-access RCS API and its global mobile messaging network lets enterprises and other messaging vendors enjoy RCS business messages with any consumer. No infrastructure required.

And there's no need to wait until every mobile operator and handset accepts RCS. We ensure every RCS message sent to an incompatible phone reverts

to an SMS format. If you already have an automated text messaging system in place, you're ready to take advantage now.

We can also automatically transform a message from RCS Universal Profile 2.0 (the new version of RCS) to Universal Profile 1.0 (its predecessor). This means older RCS phones also get an enhanced experience over SMS. Simple.

The data is already in – 2 early case studies

In 2018, Virgin Trains partnered with Vodafone and OpenMarket to become the world's first company to launch an RCS communications program on a commercial basis.

RCS messages are sent to customers' smartphones 10 minutes before their arrival into London's Euston Station. They contain updates for underground train services, complete with buttons for more detailed information.

Customers love them. At the time of writing, everyone who has fed back has awarded the service a five-star rating. Not one has chosen to opt out.

Also in 2018, global sandwich giant Subway teamed up with mobile

comms specialist Mobivity – an OpenMarket partner – to test RCS for customer promotions.

The team sent one group of customers two offers via SMS, then sent another group the same two offers via RCS. The wording for the offers matched exactly, but the branded RCS version included interactive buttons and product images.

The conversion rate was an incredible **140 PER CENT HIGHER** than SMS for a two-sandwich deal offer, and **51 PER CENT** higher for a \$20 meal deal.

Check out the case study [here](#).

140%
higher than SMS

RCS features

RCS Business Messaging includes a broad set of app-like features.

- **Verified sender**
ensuring the message is not spoofed
- **Custom branding and colors**
so everyone recognises you
- **Rich media carousels**
send pictures, videos and GIFs in messages
- **Engagement 'buttons'**
so consumers can make a purchase, make a phone call, launch a map, navigate to a web site, vote in a poll, and much more

Mobile operators everywhere have united around the RCS universal profile 2.0. The profile also has support from Google, Microsoft, Samsung, LG, Huawei, and other major phone manufacturers.

Soon, every new Android phone will accept RCS in the default messages inbox. And every mobile operator globally will support it. Apple is yet to get on board. But in the meantime, any message sent to an Apple device can revert to SMS.

A speedy rollout

Android had an 85% share of shipped smartphones in 2018. Factor in the two-year renewal cycle of smartphones and the buy-in of phone manufacturers. It follows that RCS accessibility will grow fast.

A treasure trove of insights

Expect delivery and read receipts by default, on-screen event tracking and the ability to define custom call-back data tied to each customer action. Also plug RCS directly into your third-party data sources for powerful insights about your customers. You can then continually test and optimize the experiences you offer.

RCS use cases

Why not kick off with sending simple branded messages? Then move on to design more interactive and valuable interactions, including:

- Calendars with bookable slots for appointments
- Maps for directions
- Tickets, vouchers and coupons
- Boarding passes, terminal maps and visual status updates for flights
- Instruction videos from your support or customer service team
- Buttons that mean customers can tap rather than text a reply

Disrupting apps

RCS is a clear evolution from the simple experience of text messaging. But it's revolutionary in how it will change the way consumers use their smartphones and the apps that live on them.

Apps simply don't suit many businesses and consumers. People don't want to create an account and download an app just to receive tickets for the odd flight, train journey or concert. RCS solves this problem because app-like interactions can be facilitated through the messaging inbox we know so well.

A worldwide rollout is underway

All the major carriers in the UK, US, Japan and Canada are expected to be rolling out RCS Business Messaging for their customers in 2019. Many rollouts are already complete. Across the rest of the world, there's similar RCS commitment from carriers.

Customers want it now

Consumers appear to be ready to use RCS to communicate with businesses.

Recent research by OpenMarket reveals that 72% of consumers widely use SMS to communicate with businesses. But they're eager to enjoy richer communication. Four out of five respondents (82 per cent) said they would prefer RCS messaging interactions over SMS. And 79% said they'd feel safer interacting with a business that had verified company branding included within its texts.

Your next step

If you'd like to learn more about SMS and RCS, give us a call. We'd be happy to pass on what we know.
